

### Do you have a client who would benefit from the Salute RDX?

Dynamic Alternating Pressure Therapy creates an area of zero pressure leading to "True Tissue Off Load", inducing hypermeia- a critical component to increasing healing time

No "bottom out" meaning it will remain inflated even in a power outage

The "Happy Heel Protection" system bleeds out 25% of air from the heel section in order to soften up the heel area for fragile heels

Can be a cost effective solution over several other mattress types

No periodic checking and/or adjustments for inflation

## Salute RDX

*HME's team is a class leader in surface and low air loss mattress*

Provides low air loss, which assists microclimate management (temperature and moisture control) to keep the wound dry, cool, and promote healing
