

Exclusive Featured Product

**PARAGLIDE®**  
REPOSITIONING SYSTEM

Paraglide® is an easy-to-use device that attaches to a wheelchair and will reposition a person from a slouched position to a properly seated upright position at the touch of a button – safely and independently.

This lightweight, battery-powered device easily attaches to existing wheelchairs and can reposition users weighing up to 550 lbs, ensuring free movement throughout the day. It features a Bluetooth-enabled remote for monitoring and alerts, built-in safety mechanisms, and a durable, washable fabric sheet for added comfort and convenience.

**Key Features**

**Paraglide® is the only wheelchair repositioning device that:**

- Enables wheelchair users to shift between slouched and upright positions for comfort and to protect against painful pressure injuries.
- Empowers wheelchair users with independence to move at the touch of a button, reducing reliance on overhead lifts and minimizing risk to caregivers.
- Eliminates the risk of caregiver injury, offering a quick and safe automated solution to an often risky client repositioning task.

**Other Key Features:**

- Easily attaches to pre-existing wheelchairs
- Will reposition a person weighing up to 550 lbs
- Battery-powered (rechargeable)
- Resets after each use, allowing free movement throughout the day
