 Seat

It's all about progress.

Designed for children ages 1-5, **Squiggles Seating System** is suitable for use as a home chair, school chair or with a mobility base. Squiggles meets all the postural, function and practical requirements of a seating system for young children with special needs while maintaining a fun, colorful design.

Practicality

Squiggles Seating System was designed with both the child and caregiver in mind. A 1 inch, one piece seat base cushion ensures comfort so the child is able to focus on other activities. The removable, machine washable cushion cover makes it easier to clean while the tools sent as a standard help prevent loosening through continued use.

Pelvic Stability

A 4-point pelvic harness and ramped base cushion provide optimum support.

Head & Trunk Alignment

Support is enhanced with the addition of the shoulder support, providing increased shoulder protraction, and therefore midline positioning of the upper limbs.

Leg & Foot Positioning

The one-piece footrest with optional sandals ensure maximum stability and allows for growth. Adduction features and optional pommel allow for optimal upper leg positioning.

Specifications

Age	1-5 Years
Seat Width	6.3" – 10.2"
Seat Depth	7.5" – 11.4"
Weight Capacity	48.4 lbs.
Weight	13.2 lbs.
